

# BOOMING WIND & SOLAR ENERGY PROJECTS

**> 35 projects**  
in wind energy market  
completed till 2020

**> 1,550 MW**  
in total within our  
wind farm projects

**> €1,560 mln**  
total investment CAPEX of  
projects we are involved in

Wind turbines or solar panels don't have to look the same. It is an art, where solutions require creative approach to bring efficiency.

Bilfinger Tebodin is a perfect combination of two key points to perform its best for your energy project:

1. Consultancy approach, thinking creatively and smartly selecting a project location
2. Engineering preciseness and state-of-the-art technologies

**The high level of services provided as an engineer, excellent professional preparation and the involvement of employees, allowed us to perform our duties on the project very well.**

***GDFSUEZ Zielona Energia Sp. z.o.o.***

## SERVICE OVERVIEW

- > Feasibility study
- > Due diligence
- > Engineering (civil design & infrastructure)
- > Permitting support
- > Project management
- > Construction management

We know the challenges of energy companies who have to deal with various contractors. It's common in this market to split responsibilities for different parts of the project. Years of experience enable us to develop a complex solution to make things less complicated and cost-demanding for the client.

As a single partner, Bilfinger Tebodin is able to fulfill the whole cycle of a wind farm project, from initial analysis (due diligence, feasibility study) to post-construction activities (management of contractors during a guarantee period).
